

NEW EDITION 2008

Wear part and spare part catalog for oxyfuel mechanized cutting

All for your daily service: Cutting nozzles · Cutting torches · Gas supply systems accessories

Oxyfuel cutting

75

Oxyfuel cutting is the major thermal cutting application for low- and non alloyed steel.

By low costs, premium cutting quality and cut surfaces are assured. The process is flexible, i.e. used on CNC cutting machines, portables and as well with manual cutting torches.

Performance and economy of the cutting process is highly influenced by operation the right cutting torches and cutting nozzles.

Furthermore gas supply systems and the properties of fuel gases take a major part to influence the cutting process.

This catalogue gives a summary about the ESAB genuine oxyfuel product range.

ESAB products fullfill the valid technical standards, European directives and regulations.

Machine cutting nozzles

Machine cutting nozzles

Today's, labour costs and hourly rates for machines genarate the majority of the costs for mechanised cutting.

A higher cutting speed enables to reduce the major costs and makes cutting once more efficient.

ESAB offers a range in 3 performance classes, which allow an individual solution of the cutting task.

Only ESAB genuine nozzles assure the demands on cut quality, reliability and mostly safety of the complete cutting system.

Standard nozzle IAA 250 K for Injector cutting torches – Acetylene

IAA 250 K is a two piece cutting nozzle and operates with with an convergent- divergent cutting channel for cutting ox-pressures between 4-7,5 bar.

The ring shaped preheating flame profile wraps totally the cutting oxygen jet for equal preheating.

Application:

- straight cutting and contour cutting 3-250 mm in acc. to EN ISO 9013
- hole piercing up to 80 mm
- Fits into torch series, COOLJET-BIE and BID

Customer benefits:

- good value standard system
- chrome plated for longer service life
- easy and safe to handle

Cutting data:

High speed nozzle IAD 300 L for Injector torches – Acetylene

The IAD 300 L provide a higher cutting speed and uses the high performing properties of acetylene gases.The cutting nozzle operates with an expansion cutting oxygen channel for pressures between 6,5 and 8,5 bar.

Especially the nozzle size 7-15 mm produces excellent cuts free from slag, even with oversized nozzle to plate distances.

Application:

- straight cutting and contour cutting 3-300 mm in acc. to EN ISO 9013
- Hole piercing up 150 mm
- Fits into torch series *COOLJET*-BIE, BID and *MULTIJET*-BIF

Customer benefits:

- up to 15% higher cutting speed compared to standard nozzles
- No additional adaptation required to the oxygen supply
- chrome plated for longer service life
- insensitive against nozzle to plate variations

Cutting data:

- Cutting and consumption table 0.300.053 for BIE und BID

High performance nozzle IAC 300 L for Injector torches – Acetylene

The IAC 300 L provides a super high cutting speed and makes cutting more economical. IAC operates with an expansion cutting oxygen channel (Laval) for oxygen pressures between 8,5 and 11 bar. Together with acetylene shortest preheating times will be ensured.

In addition IAC shows excellent hole piercing performance and makes here with cutting much more efficient.

The use of this nozzle presume an oxygen supply pressure of min.11 bar at torch inlet.

Application:

- Straight cutting and contour cutting 3-300 mm in acc. to EN ISO 9013
- Hole piercing up to 150mm
- Fits into torch series COOLJET-BIE, BID and MULTIJET-BIF

Customer benefits:

- Up to 35% higher cutting speed compared to standard nozzles
- Short preheating time
- Excellent hole piercing properties, also above 150mm
- Chrome plated for a longer service life
- Premium cut quality at high cutting speeds
- Together with *COOLJET* and *MULTIJET* highest cutting economy will be achieved

Cutting data:

Standard nozzle for Injector torches

IPA 250 K for Propane and mixed fuel gases · IMA 250 K for Natural gas

IPA 250 K is two piece cutting nozzle and operates with a convergent - divergent channel for cutting ox-pressures between 4-7,5 bar.

IMA systems consists of the same inner nozzle. The external nozzle is designed with a special flame stabilisation for the use of natural gas.

For mixed fuel gases an external nozzle with lower flame stabilisation than for propane will be used.

Application:

- Straight cutting and contour cutting up to 3-250mm in acc.to EN ISO 9013
- Hole piercing up to 125 mm
- Fits into torch series, COOLJET-BIE and BID

Customer benefits:

- Good value standard system
- Easy and safe to handle
- Outer nozzle chrome plated

Cutting data:

		0004450562 (natural gas)

High speed nozzle IPB 300 L for Injector torches Propane/Natural gas/mixed fuel gases

The IPB 300 L enables a higher cutting speed and is designed for the use with all slow burning fuel gases. The IPB operates with an expansion cutting oxygen channel (laval) for oxygen pressures between 6 and 8,5 bar.

The preheating heating flame geometry allows the use for bevel cutting in triple torch units also with natural gas results. It's easy and safe handling, variety in all cutting processes and excellent cutting results makes it user friendly.

Application:

- Hole piercing up to 150 mmBevel cutting X and Y (please note systems) GPB/GYB)
- Fits into torch series COOLJET-BIE, BID and MULTIJET-BIF

Customer benefits:

- Up to 15% higher cutting speed compared to standard nozzles
- Cutting system for all purpose
- Provides cutting capacity above mentioned cutting range
- Outer nozzle chrome plated for longer service life
- Excellent cutting performance also on bevel cuts below 45° cut angel
- UL listed in USA
- Insensitive against nozzle to plate and pressure variations
- No additional adaptation required to the oxygen supply

Cutting data:

High performance nozzle IPD 300 L for Injector torches Propane/mixed fuel gases

The IPD 300 L provides a super high cutting speed and makes cutting more economical

It enables extreme quick preheating of material also with propane and fullfill the increasing demands on cutting productivity.

IPD operates with an expansion cutting oxygen channel (Laval) for oxygen pressures between 8,5 and 11 bar.

The user needs to ensure oxygen pressure supply of min 11,0 bar at torch inlet.

Application:

- Straight cutting and contour cutting 3-300 mm in acc. to EN ISO 9013
- Hole piercing up to 150 mm
- Fits into torch series *COOLJET*-BIE, BID and *MULTIJET*-BIF

Customer benefits:

- Highest cutting speed and cutting economy, up to 35% compared to standard nozzles
- Quick preheating
- Excellent hole piercing performance
- Chrome plated against premature wear
- · High cutting quality at high cutting speed
- Together with *COOLJET* and *MULTIJET* highest cutting economy will be achieved
- UL listed in USA

ESAB

Standard nozzle mix GAA 300 L for Acetylene

The GAA 300 L is a compact and robust. The main application is bevel cutting with triple torch units and on all cutting applications where high heat radiation will occur, i.e. welding edge preparation with more than one torch.

It's unique design secures high sustained backfire resistance and high reliability. In addition the nozzles provides 100% concentricity less adjustment work of cutting channel, which simplifies and reduces the time for machine setting a lot when using VBA- triple torch units.

The accuracy of bevel shape (Alpha°) will remain exactly also after change of nozzle. GAA operates with convergent divergent cutting oxygen channel for oxygen pressures between 4 and 7,5 bar.

Application:

- Bevel cutting X und Y profile with all triple torch units
- Straight and contour cuts in acc. to EN ISO 9013
- Hole piercing up to 130 mm
- Fits into torch series BGB and all torches for triple heads with 30° IC cone

Customer benefits:

- Absolute backfire resistant
- High thermal resistance
- 100% concentricity
- Robust
- 100% quality approved
- Chrome plated

High performance nozzle mix GAC 100 L for Acetylene

ESAB

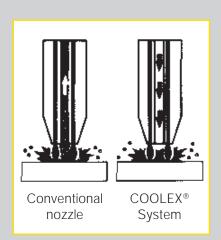

The GAC 100 L offers in addition to the excellent properties of the GAA 300L, further advantages.

The COOLEX system enables up to 2 times higher service life by efficient cooling of the cutting oxygen channel.

During preheating the plate material, a small amount of heating oxygen (COOLFLOW) streams into the cutting channel. The outcome is an efficient cooling of nozzle interior. Further more the nozzle operates with the high performance cutting oxygen channel for oxygen pressures between 8,5 and 11 bar. This enables a higher cutting speed up to 30% compared to standard nozzle type.

High speed nozzle mix GPB / GYB 300 L for Propane/Natural gas and mixed fuel gases

The GPB/GYB nozzle mix system offers the same cutting properties like the IPB nozzle. It is robust and designed for the use in all triple torch units.

The nozzle system contains 3 parts, cutting nozzle, mixer and heating nozzle which are available individually.

Application:

- Bevel cutting X und Y profile with all triple torch units
- Straight and contour cuts in acc. to EN ISO 9013
- Hole piercing up to 150 mm
- Fits into torch series BGB and all torches for triple heads with 30°IC cone

Customer benefits:

- High precise cutting in triple torch units based on high concentricity
- Robust and heat resistant
- Fits into competitor torch systems
- Chrome plated outer nozzle for longer service life

Heavy duty cutting nozzle GPA 500 L for Propane/Natural gas

GPA 500L is designed for oxyfuel cutting above 300 mm mm thickness. It's unique design provides high heat resistance.

The wide cutting range requires a proper gas supply for oxygen with flow performance higher than 100 m³/h.

Application:

- Straight and contour cutting 300-500 mm
- Bevel cutting up to 60° with separate preheating
- · Application only in single torch units

Customer benefits:

- Use in standard torches BGB type
- High cutting performance
- Proper cutting quality

Machine cutting torches

Machine cutting torches

■ All ESAB machine cutting torches are designed in accordance with EN ISO 5172. Their mechanical properties, the unique design and reliability guarantee a high efficiency for modern oxyfuel machine cutting.

The combination of genuine ESAB nozzles with ESAB torches results in:

ESAB A 3-150

- Highest cutting speed
- Highest cutting accuracy
- Smooth and vertical cut surface
- Reliable production process

ESAB naming

COOLJET BIE – highest safety with integrated cooling

The *COOLJET* machine cutting torch with innovative oxygen cooling enables a better heat conduction and ensures highest reliability for the daily work. The cutting nozzle and the torch stays cool and safe. It reduces maintenance costs and ensures the best cutting quality with the highest cutting speeds.

COOLJET BIE flow scheme

COOLJET interior

Integrated cool flow valve

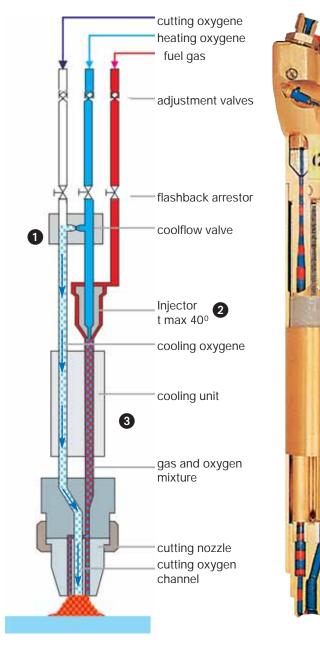

The valve body contains a cool flow valve ① During preheating the material a small heating oxygen stream flows into the cutting oxygen channel.This prevents hot gases streaming up into the torch.The cutting nozzle and torch are consequently cooled, preventing spatter and prior breakdown of nozzle.

Injector and cooling unit

A safety injector 2 is located in a stable brass body. This guarantees a heat transfer away from injector and ensures proper mixing of fuel gas and heating oxygen. The Aluminium unit 3 completes the cooling function between the mixing chamber and cutting oxygen tube.

Customer benefits:

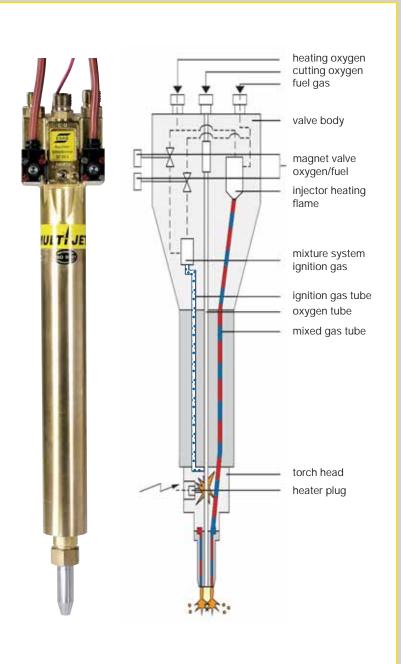

- Low maintenance
- Quicker preheating and higher cutting speed
- Longer service life of torches and nozzles
- Up to 2 times Longer service life of torches and nozzles
- Low torch temperature not exceeding 40°C at mixing system
- Highest operation safety during hole piercing and heavy duty cutting
- Extreme back fire resistance
- 3-300 mm cutting range
- Stable flame due to constant gas flows

²³

The development of *MULTIJET* machine cutting torch with automatic internal ignition is a drastic improvement in oxyfuel cutting. It provides, more consistent operation. With higher safety by eliminating the conventional external igniter. The *MULTIJET* machine cutting torch comes along with various new benefits for the daily cutting work.

Reasons to use the *MULTIJET* torch:

- Clear Robust design leads to highest reliability
- External attachment eliminatedresulting in a compact design with less collision damage
- Protected internal ignition less cleaning and maintenance
- Distance between torches can be reduced to a minimum
- Ignition more reliable than conventional external igniter
- Retrofit able to existing ESAB machines
- Can be used with flame and cutting process control
- Exclusively patented by ESAB
- UL (Underwriter Laboratories) listed in US

Customers benefits:

- More automation
- Superior reliability
- More productivity

Spare parts for machine cutting torches, cutting torch accessoires

Normally ESAB does not provide internal spare parts for machine cutting torches BIE and BID. If any repair is required needed please use the ESAB torch exchange system. Send back an old ESAB one and you will receive a new torch for a good value price. Only ESAB genuine exchange torches will guarantee safe function and prevent further breakdowns.

Please require information from our spare and wear part sales.

- 1 Nozzle nuts for injector cutting torches for COOLJET BIE / BID / MULTIJET BIF Art. No. 0004400110
- 2 For BGB/BGC cutting torches and torch heads for nozzle mix Art. No. 0003551506
- 3 Sensor retainer for flame monitoring with *MULTIJET* and BGC torches Art. No. 0002221263
- 4 Nozzle adapter with O-ring for slitting adapter BI 2 and bevel cutting device Art. No. 0002221093
- 5 Swivel nut for slitting adapter BI2 Art. No. 0004400111
- 6 Nozzle retainer for slitting adapter Art. No. 0004404702

Further spare parts on special request!

Torch accessories and tools

Slitting adapter Type BI 2 for Injector torches BIE/BID

Used in operations requiring parallel cuts as in coupon or slot cutting. Working range 30-400 mm Cutting capacity 3-60 mm Not suitable for *MULTIJET*-BIF

Maintenance and service tools for cutting torches

Seating tool for nozzle seats with 30° IC cone, for torch series BGB,BGC, and all nozzle heads Art. No. 0002322006

Seating tool for injector torch nozzle seats, torch series BIE, BID, BIF Art. No. 0002322001

Attention! Seat tooling please carry out gently and careful! In case of any question please contact your ESAB specialist near by.

Pressure control gauge for inspection of oxygen and fuel gas pressures on cutting torch inlet. Correct pressure setting minimises cutting faults

Cutting oxygen 0-10 bar, G3/8" r.h. Art. No. 0004464314

Pre heating oxygen 0-10 bar, G1/4" r.h. Art. No. 000446313

Fuel gas 0-2,5 bar, G3/8" l.h. Art. No. 000446303

Pressure control device 0-16 bar for cutting oxygen for torch head assembly.

For pressure monitoring the corresponding cutting nozzle will be screwed into the outlet. For use with BGB nozzle mix add on nozzle adapter. Art. No. 0004457010

Advantage: Superior pressure testing method and pressure indication

Cleaning powder KR21

For all injector and nozzle mix cutting – and heating caps Art. No. 0003770030

Leakage detecting spray

For quick locating of leaking tubes, connection, hoses etc. Art. No. 0003770031

Nozzle cleaning brush, brass Art. No. 0003770014

Cleaning brush for heating nozzle Art. No. 0003770013

Nozzle cleaning needle kit Art. No. 0003770016

Conical cleaning needle For high speed and high performance nozzles Art. No. 0003770020

Accessories and protective equipment

Manual igniter Art. No. 0003714008

Saturn shade 5

Universal protective spectacles in shade 5 for cutting and welding inspection. Equipped with abrasion resistant lenses and adjustable temple arms. CE approves according to EN 166 / EN 175 Art. No. 0003770032

Heavy duty Black Glove

Made of black cow-grain leather. High dexterity with KEVLAR stitching ensures that the glove can resist hard mechanical stress. Fully welted, CE approved, Cat 2. Art. No. 0003770033

Studs

Height 80 mm, for 10 mm flat steel Art. No. 0003548079

Robust and lockable steel case with resistant foam insert and tool tray.

The foam insert enables to keep all ESAB cutting nozzles and heating nozzles. The top cover contains space for operating data and documentation. Dimensions: W 370 x H 105 x D 315

Case without tools and without nozzles Art. No. 0002350038

Case with tool set, without nozzles Art. No. 0002350020

HF-accessories

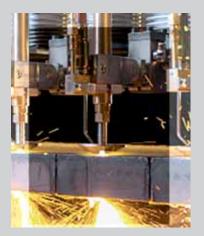

HF-ring for capacitive height control

Art. No. 0003190235 For other ring types take corresponding machine spare part list

Sensor for HF-ring Art. No. 0002067164

HF-cable Art. No. 0613366473

Portable cutting machine IMP

IMP - A rugged, portable, economical machine designed for accuracy and efficiency. The IMP can be equipped with 1 or 2 machine cutting torches for straight and bevel cutting, cutting of contours, strips and circles.

The machine is truly portable because it only weighs 9 kgs complete with single machine cutting torch and hoses. A sturdy handle makes it easy to carry and to steer. For convenience of operation, all the controls are grouped together close to the handle. A new design of clutch makes the positioning and start of a cut an easy operation. Nozzle changing is made easy by standing the machine on its end.

Cutting machine IMP

Art.-Nr. 65.516.1401 Circle cutting device, connecting cable 10 m. nozzle wrench

Torch assembly consisting of:

Extension arm for single torch, Gas manifold Cutting torch for nozzle mix Nozzle kit up to 60 mm Torch clamp Hose package

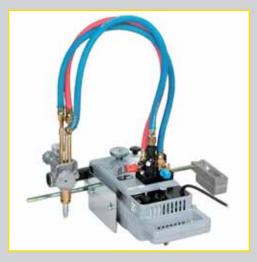

Torch assembly Acetylene Art. No. 65.516.1420

Torch assembly Propane / Natural gas Art. No. 65.516.1421

Aluminium track 2 m length, incl. clamp spring Art. No. 65.516.1451

Included in delivery Operating manual Art. No. 65.516.9821

Technical documentation Art. No. 65.516.9902

The IMP will be used for:

- Contour cutting by hand guidance of the machine
- Straight cutting with a guide bar or track guidance
- Strip cutting with one machine cutting torch mounted on each side
- Plate edge preparation with both machine cutting torches mounted on one side
- · Circle cutting with circle cutting attachment

Technical data: Weight (kg) 9 Power supply (V/Hz) 230 / 50-60 Power consumption 60 No. of torches 1 Max. cutting thickness (1 Brenner) 3 - 100 mm Max. cutting thickness (2 Brenner) 3 - 75 mm 75 - 1000 Cutting speed (mm/min.) Lateral torch movement (mm) 150 Max. parallel cut (mm) 300 Min. parallel cut (mm) 45 Max. / Min. circular cut 1380 / 75

For order information please ask your nearest ESAB partner!

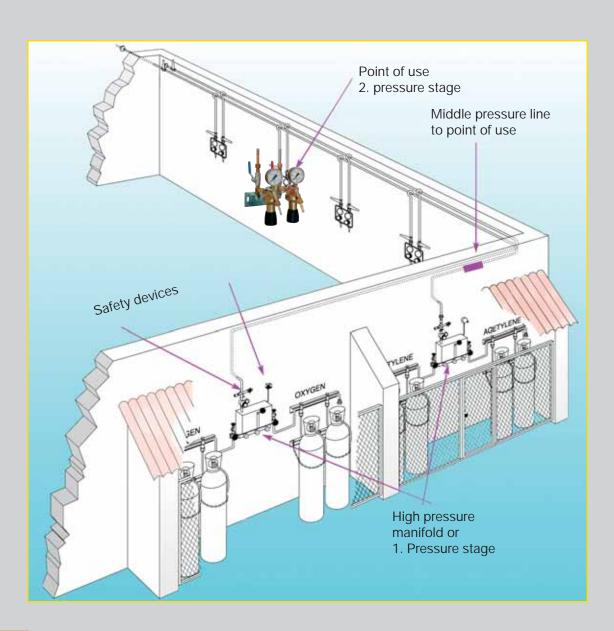

Gas supply – an important requirement

ESAB cutting systems offers on request for each machine the corresponding gas supply system. Subsequent equipment are point of use stations, to be used as a second pressure stage near machine after tank or high – pressure installations.

ESAB Point of use systems are aligned to the particular machine type. They ensure the necessary flows and required pressures for an absolute process reliability. The assembly and pipe installation work needs to be done in accordance with the national valid rules and technical standards by the customer itself, or by anauthorised installation company. ESAB would therefore recommend skilled and established firms.

Cylinder regulator for Propane **Typ DIN-Control** Art. No. 0004466860 P1= bis 20 bar, P2= 1,5 bar Q^{max}= 8 m³/h

Cylinder regulator for Heating oxygen Typ DIN-Control Art. No. 0004466838 P1= 200 bar, P2= 10 bar Q^{max}= 50m³/h

Mentioned article numbers are valid for german application. When ordering local standards please ask your nearest ESAB specialist.

Safety device DIN EN 730 -1Acetylene und PropaneArt. No. 0004414022Heating oxygenArt. No. 0004414045

For mechanized oxyfuel cutting acetylene, propane and natural gas are the most popular gases. Sometimes mixed fuel gases such as mixtures with ethane and methyl acetylene are used. Primarily all fuel gases differ in their chemical and physical properties and their mixing ratio with oxygen. Therefore the design of torch and nozzle systems differs accordingly.

Practically the user has to distinguish between general qualification and preferential aptitude of fuel gases. We are willing to advice you together with your supplier of fuel gases which type of gas would be the right one for most of your applications. ESAB provides for all fuel gases corresponding reliable and economical products.

Acetylene C₂H₂

Is manufactured through the chemical reaction between water and calcium carbide and owns an unstable character. Therefore Acetylene is stored dissolved with Acetone together with in special gas cylinders with an pourose mass. Acetylene provides of all fuel gases the highest temperature in the primary flame. This property is especial beneficial while manufacturing bevel cuts for welding edges.

Propane C₃H₈

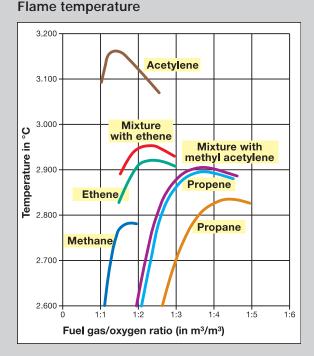

It's a fuel gas generated during refinement of crude oil. The storage takes place liquefied in cylinders or tanks. Depending on the ambient air temperature different steam pressures will arise. The temperature of primary flame is lower compared to Acetylene, but Propane comprises a high heat value per kilogram gas in the secondary flame. This property is expedient for cutting thick materials.

Natural gas / Methane CH4

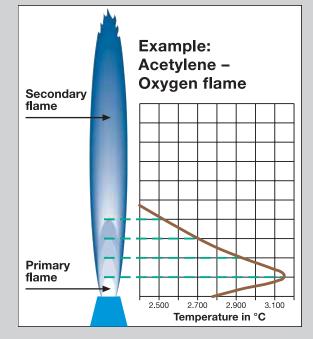

Primarily consisting of Methane. Depending on regional resources, properties of combustion may differ strongly. Usually the gas supply raised reasonable through gas pipelines direct to customers distribution network. Methane is available also compressed in gas cylinders. The heat value of primary flame is the lowest compared to all other fuel gases. By increasing the mixing ratio of oxygen the performance of combustion can be raised something.

Oxygen O2

Does not combust oneself, but it stimulates significant the combustion of above mentioned gases. Oxygen needs to be mixed together in corresponding amounts to achieve the highest flame temperature (see picture below). In the presence of oxygen oil and grease can be extremely dangerous and could combust explosively. In addition oxygen is responsible for combustion of the basic material and to blow out the liquid oxides.

Temperature distribution within an Acetylene oxygen flame

The overleaf values are based on the following assumption:
Oxygen with a minimum purity of 99,5%, non alloyed steel up to 0,3%C, clean surface without Primer coat. The consumption values correspond to standard condition. When
profile cutting the speeds given for quality I cuts are to e reduced by about 10%. The speeds are to be reduced for bevel cutting of 30° by about 25%, of 45° by about 45%.

The overleaf values are based on the following assumption: Oxygen with a minimum purity of 99,5%, non alloyed steel up to 0,3%C, clean surface without Primer coat. The consumption values correspond to standard condition. When
profile cutting the speeds given for quality I cuts are to e reduced by about 10%. The speeds are to be reduced for bevel cutting of 30° by about 25%, of 45° by about 45%.

ESAB

Narrowing of kerf (divergent)

- Forward speed of torch too fast - Distance between nozzle and sheet metal to big
- Dirty and / or damaged nozzle

Concave cut surface profile

- Forward speed of torch too fast - Dirty and / or damaged nozzle or nozzle size too small for the thickness to be cut
- Cutting oxygen pressure too low

Melted down top edge with adherent slag

- Cutting oxygen pressure too high
- Heating flame too strong - Distance between nozzle and sheet metal too big

Single gouges

- Forward speed of torch too slow
- Scaled or corroded or dirty sheet metal surface
- Distance between nozzle and sheet metal too small
- Flame too weak
- Flame extinguished with a bang
- Sheet metal with finely divided inclusions

Narrowing of kerf (convergent)

- Forward speed of torch too fast - Distance between nozzle and sheet metal too big
- Cutting oxygen pressure too

high

Irregular cut surface profile

- Cutting oxygen pressure too low
- Dirty and / or damaged nozzle - Forward speed of torch too fast

Lewer edge rounded

- Cutting oxygen pressure too high
- Forward speed of torch too fast
- Dirty and / or damaged nozzle

Grouped gouge areas

- Forward speed of torch too fast - Scaled or corroded or dirty
- sheet metal surface - Distance between nozzle and
- sheet metal too small
- Flame too weak

top edge

- Cutting oxygen pressure too
- Dirty and / or damaged nozzle
- Distance between nozzle and sheet metal too big

Edge melting on

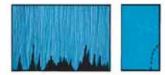

- Forward speed of torch too slow
- Heating flame too strong - Distance between nozzle and
- sheet metal too big to too small - Nozzle size too big for the

thickness to be cut

Excessive cut drag line depth

- Forward speed of torch too fast or irregular
- Distance between nozzle and sheet metal too small
- Heating flame too strong

Grouped gouges in the bottom half of the cut

- Forward speed of torch too slow
- Dirty and / or damaged nozzle
- Cutting oxygen pressure too low
- Nozzle size too small for the
- thickness to be cut
- Flame too weak
- Scaled or corroded or dirty
- (colour) sheet metal surface

Concave cut surface beneath

- high

Step at bottem edge

- Forward speed of torch too fast

- Dirty and / or damaged nozzle

String of solidified droplets

- Heating flame too strong - Distance between nozzle and
- sheet metal too small - Scaled or corroded sheet metal

surface

Irregular depth of cut line

- Forward speed of torch too fast or irregular
- Flame too weak

Firmly adherent slag line ad bottom edge

Hole piercing data and data for bevel cutting

ESAB cutting systems offers various datafiles for these applications. The basical settings provided by the machine controller may readjusted after machine setting through ESAB service in order to fit to the cutomers condition and cutting task.

Please request ESAB Cutting Systems support.

ESAB. Your partner for welding and cutting.

Seven decades of experience and a consistent focus on the needs of our customers are the basis for the successful and comprehensive range of products for our cutting machines. In accordance with the various thermal cutting methods – plasma cutting, oxyfuel cutting and laser cutting – ESAB has developed a series of machines that efficiently combine the best quality cuts and high cutting speeds and allow an intelligent integration in automated manufacturing processes.

ESAB CUTTING SYSTEMS GmbH
